

How To Call External APIs Integration

Revision History:

Version	Author	Date	Modifications
1.0	Amir Alfoly	2024-02-14	First version

1. Authentication

URL: <https://api.flextock.com/base/auth/>

Method: POST

Body :

```
{
  "username": "username",
  "password": "password",
  "key": "api key"
}
```

Parameters:

Name	Description
username	merchant username
password	merchant account password
key	the api key provided for authentication

Returns :

```
{  
    "refresh":  
"eyJ0eXAiOiJKV1QiLCJhbGciOiJIUzI1NiJ9.eyJ0b2t0bl90eXBIIjoicmVmcmVzaCI6ImV4cCI6MTY0MzI4N  
Tg1OCwianRpIjoiZjcyMWUxOGM3OGI0ND",  
    "access":  
"eyJ0eXAiOiJKV1QiLCJhbGciOiJIUzI1NiJ9.eyJ0b2t0bl90eXBIIjoieWNjZXNzIiwiaXhwLjoxNjQzMjAzMDU4LCJqdGkiOiI3Ym"  
}
```

access: is the token used in the bearer parameter to authorize other apis.

2. Create Product

This endpoint allows you to create products on Flextock's system.
In one request, up to 100 products can be created.

URL: <https://api.flextock.com/external-integration/create-products/>

Method: POST

Body:

```
{
  "products": [
    {
      "sku_code": "test-live-124",
      "sku_name": "test-live-123",
      "sku_description": "SKU descriptiontest",
      "sku_image_url": "https://cdn.images.example/images/sku00111.jpg",
      "price": 200
    }
  ]
}
```

Returns:

If the products is created successfully, the response will be:

```
{
  "response": [
    {
      "sku_code": "test-live-125",
      "message": "SKU code created successfully."
    }
  ]
}
```

If the product already exists:

```
{  
  "response": [  
    {  
      "sku_code": "test-live-124",  
      "message": "SKU code already exists."  
    }  
  ]  
}
```

3. Create Order:

This endpoint allows you to create orders on Flextock's system.
In one request, up to 100 orders can be created.

URL: *https://api.flextock.com/external-integration/create-order/*

Method: POST

Body :

```
{
  "order_code": "test-live-order-123",
  "order_date": "2021-01-10",
  "cash_on_delivery": 100,
  "integration_source": "barmaja",
  "vendor_name": "barmaja",
  "customer_address": {
    "country": "Egypt",
    "city": "Cairo",
    "area": "Heliopolis",
    "address_line1": "24 Mohamed abd el hady",
    "address_line2": "24 Mohamed abd el hady",
    "building_no": "5",
    "floor_no": "2",
    "apartment_no": "1",
    "is_work_address": false,
    "first_name": "Muhammad",
    "last_name": "Ashraf",

    "phone_number": "01236547854",
    "secondary_phone_number": "01236547854",
    "note": "delivery will be at 2:00 PM"
  },
  "line_items": [
    {
      "sku_code": "test-live-123",
      "quantity": 1
    }
  ]
}
```

}

Parameters:

Parameter name	Description
order_code	Unique order reference at the merchant
order_date	Order creation date at the merchant, this is for reference
cash_on_delivery	The total cost of the order, will be 0 if the order is paid online
integration_source	Put name of the merchant
customer_address.city	One of the supported cities City Name
customer_address.area	One of the supported areas City Name Area Name
customer_address.address_line1	Customer address
customer_address.address_line2	Additional address
line_items	Array of order line items
line_items.sku_code	Array of ordered products sku codes
line_items.quantity	SKU quantity

Returns:

```
{  
  "message": "Order created successfully."  
}
```

SN: Order code should be unique.

4. Get Order status:

This endpoint takes the order code in the body and returns the current status of the order and its tracking data.

In one request, it can take up to 100 orders

URL: <https://api.flextock.com/external-integration/order-status/>

Method: POST

- Get status single order

Body :

```
{  
  "order_code": "test-live-order-123"  
}
```

- Get status multiple orders

Body :

```
{  
  "order_code_array": [ "test-live-order-123", "test-live-order-124" ]  
}
```

Returns:

```
{  
  "courier_name": null,  
  "order_status": "canceled",  
  "tracking_number": null,  
  "tracking_url": null  
}
```

5. List products

This endpoint returns all the products on Flextock's system for the current user.

URL: <https://api.flextock.com/external-integration/list-products/>

Method: POST

Body:

```
{"request": "product listing"}
```

Returns:

A list of all the products

For example:

```
[
  {
    "item_quantity": "0",
    "sku_description": "",
    "sku_code": "TEST_FLAG2",
    "sku_image_url": "",
    "sku_name": "in stock flag test"
  },
  {
    "item_quantity": "0",
    "sku_description": "SKU descriptiontest",
    "sku_code": "test-live-123003",
    "sku_image_url": "https://cdn.images.example/images/sku00111.jpg",
    "sku_name": "test-live-123004"
  },
  {
    "item_quantity": "0",
    "sku_description": "",
```

```
    "sku_code": "1798",
    "sku_image_url": "",
    "sku_name": "Shirt"
  }
]
```

6. Get Order details:

This endpoint takes the order code in the url and returns the SKU codes in the order and its cash on delivery value.

URL: *https://api.flextock.com/external-integration/order-details?order_code=*

Method: GET

Example:

https://api.flextock.com/external-integration/order-details?order_code=test-live-order-123

Returns:

```
{  
  "Order_code": "test-live-order-123",  
  "Sku": "JER-CRASH-B-XXL",  
  "COD": 100.0  
}
```

Note that this endpoint only takes a maximum order at a time.

7. Update Product Details:

This endpoint allows the user to update the product details in our system.

URL: *https://api.flextock.com/external-integration/update-product/*

Method: Patch

Example: *https://api.flextock.com/external-integration/update-product/*

Body:

```
{
  "sku_code": "JER-CRASH-B-XL",
  "price": 1800,
  "sku_name": "Black UNISEX CRASH GAME OVERSIZE T-Shirt - XL (90KG-105KG) / WHITE",
  "sku_description": "A 10% Cotton Oversized T-shirt",
  "sku_image_url": "https://image.com"
}
```

Returns:

If the product is updated successfully it will return:

```
{
```

“**Done**”

} if there is a field missing, for example if the body doesn't have “sku_name”

The response will be:

```
{ “Please add Sku name” and so on. }
```

Note that this endpoint only takes a maximum product at a time.
